

Recycle. Different.

At **Custom Polymers**, we don't just talk recycling, we live it! Last year alone we recycled more than 200 million pounds of plastic worldwide.

As one of the largest recyclers and reprocessors in North America, Custom Polymers has been buying, processing and selling post-industrial and post-consumer commodity and engineering grade plastics since 1996.

We partner with companies to implement long-term purchasing programs to maximize the value of scrap while supplying clean, consistent recycled feedstocks to manufacturers.

Customizing successful recycling programs makes fiscal sense to our partners, and environmental sense to us all.

If you're interested in adding value to your scrap and recycling today for the next generation, contact us at **866.717.0716** or visit us online at **www.CustomPolymers.com**.

Custom Polymers PET is the premier recycler of post-consumer and post-industrial PET plastics.

Our customized washing process converts 160 million pounds of dirty PET scrap into clean flake each year. We pelletize an additional 30 million pounds of PCR PET through our state-of-the-art extrusion line, producing a pellet that is qualified by the FDA for 100% recycled content for direct food contact.

We perform stringent material evaluations to guarantee a superior product for all applications. Our flake and pellet are sold to manufacturers all over America, creating jobs, and diverting millions of pounds of plastic from landfills to ensure a brighter future.
